Modern Data Estate
State of the art Business Intelligence

Power BI

Microsoft Power BI – Let your data tell stories
Humans can remember stories better than facts. It is easy for us to recognize the meaning of a story and to derive new courses of action from it. Stories are hidden in most of our data. With Microsoft Power BI you can make the stories of your data readable. Microsoft Power BI is an interactive picture book that brings your data to life.

Artifical Intelligence

Find correlations and reasons
Like the detective in a mystery novel, AI connects the different storylines of our data to understand the past. With a complete chain of evidence, any case can be solved.

Machine Learning

Know what is to come
Like a philosopher, ML deduces the future from the observed past. The better the observed data, the more accurate the prediction.

Training and Coaching
We teach your team how to successfully establish BI and AI in your company. Essential core contents are project management, requirements definition, technical setup and application development.

KPIs and dashboard design
Our high qualified management consultants help your employees to establish a data culture in your company so that you can design KPIs and dashboards on your own.

Analysis Services

Create suitable data models
Provide your departments and AI systems with the pre-structured, required portion of all existing data and load the data completely into memory for very fast access.

Professionals at your service
We are happy to assist you with our experienced staff for your BI or AI project. For example, as support, for subtasks or for your whole project.

Data Warehouse

Achieve one version of the truth
Combine and clean your raw data. Compile perfect data from it into a SQL database or Azure Synapse and gain comparable evaluations and reliable AI insights.

Share your data models
TimeXtender generates specialized models for Power BI, Qlik or Tableau from data models created once, if required. This allows the same business logic to be used multiple times.

Qlik Q
Qlik Sense

Data Lake

Store raw data of all kinds
Use inexpensive, arbitrarily scalable data storage to provide large amounts of raw data of all formats for analysis and pattern recognition in one place.

Show your data as you like
A modern data estate provide perfect data for any analysis. The selection of the visualization tool is independent of this. Several applications are often used at the same time.

+tableau

Data Factory

Transfer data automatically
Copy your required raw data of all formats and data sources from your individual storage locations to a central data repository on a scheduled basis.

Benefit of proven concepts
We have already successfully implemented many projects with sometimes very complex software landscapes. We are happy to share our experience and our templates with you.

Dynamics 365

TimeXtender

Build a data estate yourself
With our data warehouse automation tool, your team creates all components of the modern data estate without having to know the associated tools and programming languages.

Use tailor-made connectivity
TimeXtender offers optimized connections for a range of EPR and CRM systems and more than 200 different C-Data interfaces at no extra cost.
